Prospective Respondents

**RE: Addendum #3 22-31 BAY COUNTY MAJETTE FUEL ISLAND
GENERATOR PROJECT HMGP PROJECT 4399-128-R**

Please accept this as Addendum No. 3 for the above referenced solicitation.

The following question has been received. The County's answer follows in **bold**.

1. We are confused about the intent of the generator back up. We were shown an existing panel and junction box at the corner of the building where the cut-off switch is located. Is that all we are backing up? The service appears to be in the middle of the same outside wall, but we do not know the size. There is also an existing transfer switch there. What is the existing transfer switch backing up? County's "Scope of Work" does not make any sense with regards to Gulf Power scope of work. Gulf Power would only feed a meter, not a transfer switch or main breaker. If the entire service is meant to be backed up the combination meter/distribution panel would have to be removed and a stand alone meter installed with a separate distribution panel and the SER ATS would go between them. Please advise intent and also clarify the service size. **The intent of the generator is to only power the fuel island fuel pump dispensing system and fuel island lighting.**

All respondents shall acknowledge receipt of this addendum by signing and submitting, with their bid, the addendum acknowledgement form included in the Bid package.
